TROPICAL

The MEQ Difference

Simply meeting industry standards, however stringent, is not enough. Our aim is to exceed them. When it comes to comfort, efficiency and durability, Mitsubishi Electric offers you a distinctive advantage. We call it MEQ — Mitsubishi Electric Quality. It results in benchmark leading-edge products like our air conditioners, which consume minimal power, protect your investment through a long service life, offer superior reliability and are built to take the punishment of extreme weather conditions year in and year out.

Mitsubishi Electric Offers Three Important Advantages

Comfort

Clean air, optimum temperature distribution and silent operation...

MEQ has led to the development of state-of-the-art air purification and deodorization filters that remove unwanted odors and impurities in the air. Original airflow technologies and specially designed components provide even temperature distribution even in remote regions of a room. At Mitsubishi Electric, comfort doesn't simply mean cool or warm, it means clean and quiet too.

Efficiency

Optimum cost performance and energy savings...

MEQ results in air conditioners that are rated among the best in the industry in terms of quality and energy efficiency. We strive for a perfect balance of performance, reliability, low power consumption and long service life. This is complemented by continuously introducing new technologies and components that further reduce energy requirements and negative environmental impact.

Durability

Rugged construction, rigorous testing, long-lasting operation...

MEQ is behind a mindset that goes to extremes to ensure higher quality products that protect the initial investment over years of reliable service. We subject our indoor and outdoor units to rigorous durability testing, including harsher temperature extremes than likely found anywhere in the world.

Doing Our Part to Create a Better Future for All

Core Environmental Policy

Mitsubishi Electric promotes sustainable development, and is committed to protecting and restoring the global environment through technology, all of its business activities and the actions of its employees.

R 410A refrigerant

As scientific evidence points to man-made chemicals for the damage caused to the ozone layer, we only use chlorine-free refrigerants that are safe and rated zero ODP (Ozone Depletion Potential). Accordingly, our systems require less energy to run and have a significantly lower indirect global warming potential. In short, we produce the most efficient equipment possible, while helping to protect the environment.

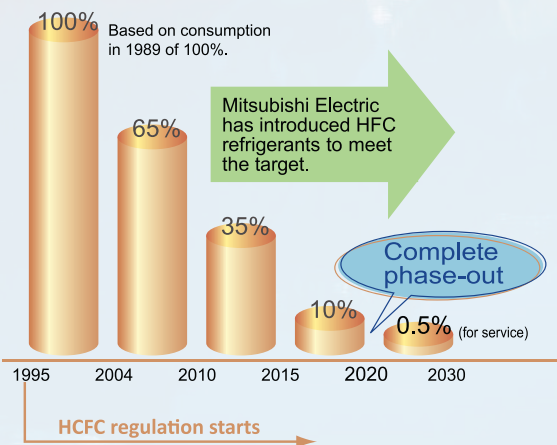

The Montreal Protocol calls for the complete abolishment of HCFC (such as R22) refrigerant production by the year 2020.

Mitsubishi Electric is committed to shifting over to HFC models from HCFC models.

Montreal Protocol

Montreal Protocol regulates HCFCs

- HCFC production has been regulated since 2004.
- HCFCs will be entirely banned by 2020.

Mechanism of ozone layer depletion by HCFCs

- 1 UV radiation causes CFC molecules to breakdown and release chlorine atoms.
- 2 Ozone molecules react with chlorine atoms and are broken down into oxygen atoms and chlorine monoxide.
- 3 Oxygen atoms react with chlorine monoxide to form oxygen molecules and chlorine atoms.

Chlorine atoms react with ozone molecules again. This repetition continues, depleting the ozone layer.

HFC refrigerants do not contain chlorine, the causative agent of ozone layer depletion, which HCFC refrigerants contain. Therefore, Mitsubishi Electric has shifted over to HFC (R410A) refrigerants from HCFC (R22) refrigerants.

Ceiling Concealed

The thin, ceiling-concealed indoor units of the PEY series are the perfect answer for the air conditioning requirements of buildings with minimum ceiling installation space and wide ranging external static pressure. Energy-saving efficiency has been improved, thereby reducing electricity consumption and contributing to a further reduction in operating cost.

PEY-P18/24/30/36/45JAG

PEY-P60GAG

The thin, ceiling-concealed indoor units of PEY-P-JAG are the perfect answer for the air conditioning requirements of buildings with minimum ceiling installation space and wide-ranging external static pressure. Energy-saving efficiency has been improved, thereby reducing electricity consumption and contributing to a further reduction in operating cost.

For elegance and compact style, PEY-P-GAG compliments the room environment with an aesthetically pleasing ceiling installation and a vast line-up of performance functions.

Flexible duct design

Inverter technologies

INVERTERS – HOW THEY WORK

Inverters electronically control the electrical voltage, current and frequency of electrical devices such as the compressor motor in an air conditioner. They receive information from sensors monitoring operating conditions and adjust the rotation speed of the compressor, which directly regulates air conditioner output. Optimum control of operation frequency results in eliminating the consumption of excessive electricity and providing the most comfortable room environment.

ECONOMIC OPERATION

Impressively low operating cost is a key advantage of inverter air conditioners. We've combined advanced inverter technologies with cutting-edge electronic and mechanical technologies to achieve a synergistic effect that enables improvements in cooling performance efficiency. Better performance and lower energy consumption are the result.

TRUE COMFORT

Below is a simple comparison of air conditioner operation control with and without an inverter.

Inverter operation comparison

The compressors of air conditioners without an inverter start and stop repeatedly in order to maintain the preset room temperature. This repetitive on/off operation uses excessive electricity and compromises room comfort. The compressors of air conditioners equipped with an inverter run continuously; the inverter quickly optimizing the operating frequency according to changes in room temperature. This ensures energy-efficient operation and a more comfortable room.

Wide Selection of Fan Speeds and External Static Pressure

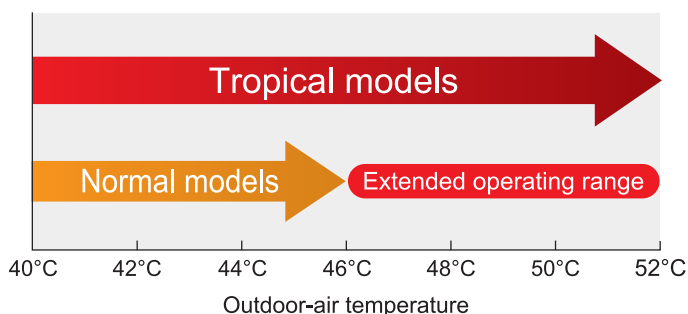

Five-stage external static pressure conversions and three fan speed *1 selections are available. Capable of being set to a maximum of 150Pa *2, units are applicable to a wide range of building types.

*1 PEY-P18/24/30/36/45JAG *2 PEY-60GAG

External static pressure setting

PEY-P18/24/30/36/45JAG	35/50/70/100/125Pa
PEY-P60GAG	50/100/150Pa

Operating at 52°C temperature

Mitsubishi Electric introduces a new tropical specifications series. New technologies which are used for the component of air-conditioners ~ a key component of air-conditioners has made it possible for units to operate at outdoor-air temperatures as high as 52°C. The new tropical specification series units are perfect for cooling homes in tropical regions.

Mechanical Specifications

1. General

All units are consisting of a ceiling concealed type indoor unit (evaporating unit), an outdoor unit and a wall mounted remote controller and are factory assembled with fully charged R-410A refrigerant. They are also tested and checked under a strict quality control system in the factory. The units can be easily connected together with refrigerant pipe and the control can be wired in the field.

2. Indoor Units (Evaporating Units)

Casing

All panels are made of 1 mm thick galvanized steel with thermal insulated.

Drain Pan

Each unit has a hard plastic drain pan to cover entire length of cooling coil with positive drainage construction. It has a 32mm OD male drain connection.

Evaporators Coils

Coils are made of 7.0mm OD and 0.23mm thick seamless copper tubing with inner grooved mechanically bonded aluminum plate fins and are factory leak tested at maximum pressure of 3.63MPa and 3 times higher than maximum pressure holding 1min. for strength test.

Evaporators Fans

Direct driven, forward curved centrifugal type fans are used to deliver an accurate airflow at low noise level. Fan driving components are mounted on rubber pad isolators to reduce noise and vibration.

Computerized Dehumidification

The electronic dehumidifier mode - where fan speed is controlled precisely - increases dehumidification volume while improving dehumidifying efficiency

3. Outdoor Units (Condensing Units)

Casing

All condensing units casing is 0.8mm thick Zinc coated alloy steel coated with polyester resin paint and it is passed factory salt spray test based on JIS Z 2371. Mounting base made of Zinc alloy steel with acrylic/polyester coating against corrosion.

Compressor

All condensing units have high efficiency inverter type compressors equipped with thermal protections. Compressor mounted on rubber anti vibrating isolators.

Condenser Coils

Coils are made of 7.0mm OD and 0.23mm thick seamless copper tubing with inner grooved mechanically bonded aluminum plate fins and are factory leak tested at maximum pressure of 4.12MPa and 3 times higher than maximum pressure holding 1min. for strength test.

Condenser Fans

Molded type DC motor used to drive the condenser fan made of light plastic propeller type designed for reduce energy requirement which ensures quiet operation. Motor protected with Class E insulation and compliance with JIS (Japanese Industrial Standards). Condenser fan protected by PE coated steel fan guard.

Filter

All units have a permanent washable synthetic filter.

Room Thermostat

All units have a wall mounted electronic control wired thermostat with features such as an on-off switch, temperature setting, in-built sensors and indication pilot lamps.

Features at a glance

Installation & Maintenance	Comfort	Others
Chargeless system	Computerized Dehumidifier	System control
Smooth installation	Quiet operation	Twin-multi operation
Self-diagnostic function		Auto restart
		Outdoor unit max. operating temp. of 52°C

Control Technologies

Advanced MA Remote Controller –
A Progressive Step in the Evolution
of Air Conditioning Control

Multi-language Display

Multi-language

Control panel operation in eight different languages

Choose the desired language, among the following languages.

Easy To Read & Easy To Use

Dot Liquid-crystal Display Adopted

The adoption of dot liquid-crystal display (LCD) technology and a large display screen for the control panel optimises visibility. Operation and control status are easily read at a glance.

Display Example [Operation Mode]

Energy-efficient Control

Operation Control Functions

Temperature Range Restriction

Air conditioner operation restricted to within a specified operating range

Set the upper and lower limits for the temperature range during operation. Excessive heating or cooling is prevented, leading to increased energy savings.

Cooling/Dry

(Setting example of minimum temp. in 25°C)

Recommended for **Office** **Restaurant**

The "Simple Timer"- starts/stops in units of 1 hour in a 72-hour period is set at the time of shipment from the factory. It can be changed to the "Auto-off Timer" function using the remote controller

Recommended for **Meeting room** **Changing room**

Only the administrator can change settings when using the Operation Lock mode.

Recommended for **Office** **School / Private school**

Public facility like public hall **Hospital** **Server room**

Auto-off Timer

Automatically turns off air conditioner

Set the time for the air conditioner to turn off automatically. The timer can be set in the range from 30 minutes up to 4 hours in 30-minute intervals.

Operation Lock

Prevent operation settings from being changed

Units can be set so that the operation mode cannot be changed. When "Operation Lock" is activated, new temperature setting commands are not accepted, thereby ensuring that the unit runs in the specified (locked in) temperature range. This promotes energy savings and prevents erroneous/ mischievous operation.

Weekly Timer

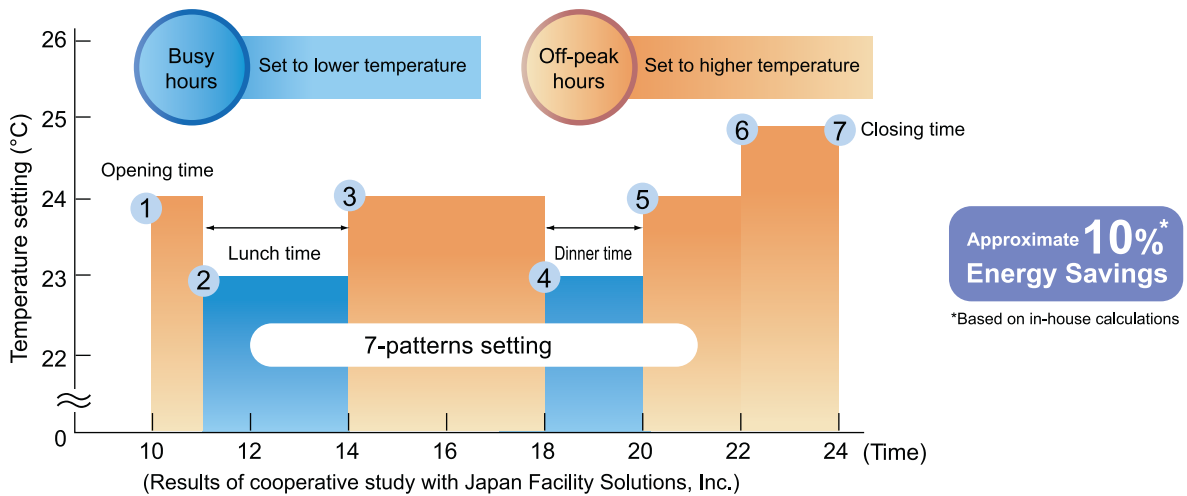

Introduced in response to market demand

Control temperature on a weekly basis

Temperature settings and On/Off control can be managed over a period of one week using the Weekly Timer. Up to eight setting patterns per calendar day are possible.

Setting the temperature 1°C higher for cooling and 1°C lower for heating leads to an energy savings of approximately 10%.

Setting Example (restaurant in summer time)

Rotation Back-up

Rotation, Back-up and 2nd Stage Cut-in Functions

(1) Rotation and Back-up Functions

Function Outline

- Main and sub units take turns operating according to a rotation interval setting.
- If one unit malfunctions, the other unit automatically begins operation (Back-up function)

System Image

(2) 2nd Stage Cut-in Function

Function Outline

- Number of units operating is based on room temperature and predetermined settings.
- When room temperature rises above the desired setting, the standby unit starts (2-unit operation).
- When the room temperature falls 4°C below the predetermined setting, the standby unit stops (1-unit operation).

System Constraint

- This function is only available for rotation operation and when the back-up function is in cooling mode.

Operation Pattern

[Back-up function only]

[Rotation function] & [Back-up function]

Operation Pattern

[2nd stage cut-in function]

MITSUBISHI ELECTRIC MULTIPLE SPLIT TYPE AIR CONDITIONERS

for a greener tomorrow

Eco Changes is the Mitsubishi Electric Group's environmental statement, and expresses the Group's stance on environmental management. Through a wide range of businesses, we are helping contribute to the realization of a sustainable society.

Warning

- Do not use refrigerant other than the type indicated in the manuals provided with the unit and on the nameplate.
 - Doing so may cause the unit or pipes to burst, or result in explosion or fire during use, repair, or at the time of disposal of the unit.
 - It may also be in violation of applicable laws.
 - MITSUBISHI ELECTRIC CORPORATION cannot be held responsible for malfunctions or accidents resulting from the use of the wrong type of refrigerant.
- Our air conditioning equipment and heat pumps contain a fluorinated greenhouse gas, R410A.
